

The 'VENULE'

TRADE MARK

An automatic aspiration syringe for
the sterile withdrawal of blood and
other body fluids.

The collection of samples of blood—an everyday procedure in clinical medicine—is greatly facilitated by the use of the 'Venule'. The sterilization of syringes, needles and containers is unnecessary, as the whole apparatus is combined in this simple, but effective, automatic aspirating syringe. The 'Venule' is compact, portable and ready for use under any circumstances.

Loose 'Venules' are packed in bulk according to the number ordered. Packed 'Venules' (single) are supplied in containers ready for postal despatch. Forms of the 'Venule' for the collection of blood serum for the Wassermann reaction.

No. 0 Plain 8 c.c. capacity.
